

# A LEADING GLOBAL COMPANY IN WELDING TECHNOLOGY AND ROBOTICS

## OTC DAIHEN in Japan

For the first time in 1919, OTC DAIHEN developed new technologies for the mass production of transformers for energy distribution. A short time later, the expertise they developed allowed them to expand their areas of business: OTC DAIHEN began to develop and produce high-performance welding machines and industrial robots for diverse areas of application in industrial automation. Since then, it has been producing sophisticated devices for semiconductor production within the electronics industry, which is developing extremely quickly. Today, OTC DAIHEN products are successfully implemented in very diverse industrial sectors across the world and are currently an important factor for growth and development in future-orientated markets.

## OTC DAIHEN EUROPE GmbH

## OTC DAIHEN in Europe

Hub for service and sales

OTC DAIHEN EUROPE GmbH was founded in 1982 in Mönchengladbach and is the continental centre for the service and sales department: it brings together all aspects of robotics, welding/cutting power sources, accessories, and more. A large number of employees work in the centre on sales and services for the close-knit European trade network.

As a subsidiary of one of the world's largest manufacturers of robots, arc welding and cutting machines as well as automation components for welding technology and material handling,

OTC DAIHEN EUROPE is developing and planning projects involving turnkey automation solutions and, therefore, is an indispensable link to system houses and dealers. Advice, project development, system production, training and customer service go hand in hand. At the European headquarters, it is all about planning and constructing robot systems, as well as demonstrations and test series for welding processes using robots and welding machines.

DAIHEN VARSTROJ has been part of the group since 2014 and is a European production plant for different DAIHEN products.

Since 2016, OTC DAIHEN EUROPE GmbH has two more locations in Mainhardt and Munich.

## Timeline

<b>1919</b>	<b>1934</b>	<b>1951</b>	<b>1959</b>	<b>1973</b>	<b>1974</b>	<b>1980</b>	<b>1982</b>	<b>1989</b>	<b>1996</b>	<b>2002</b>	<b>2003</b>	<b>2006</b>	<b>2013</b>	<b>2014</b>	<b>2015</b>	<b>2018</b>
Osaka Transformer Corporation, Ltd. is founded	Production launch for electric welding machines	Development of a UP welding system in Japan	Patent application for an MIG pulse welding process	Production launch for high-voltage transformers	DAIHEN Stud Co., Ltd. (stud welding) is founded	Market introduction of OTC arc welding robots worldwide	OTC DAIHEN EUROPE GmbH is founded in Germany	Production launch for semiconductor waver transfer robots	Market introduction of fully-digitalised MIG/MAG pulse welding technology	Market introduction of fully-digitalised D-series welding machines	Development of a 100 kV inverter for solar power generation	Product introduction of AC servo torch	Market introduction of Welbee inverter series in Europe	Opening of DAIHEN VARSTROJ in Slovenia	Product introduction of SynchroFeed	Product introduction of EasyArc welding cells

### Demonstration and trials

In the demo areas, application engineers perform test series and produce prototypes. The application designs are used in practical applications for training and exclusive customer demonstrations.

### Plant engineering

OTC DAIHEN builds turnkey automation solutions for diverse industrial sectors. Advice, project development, system production and after sales services (training, maintenance etc.) go hand in hand.

### Expanding the OTC network

We are always working on expanding the OTC network Europe-wide. By opening the new application centre in Mainhardt, we are giving our customers the opportunity to see test welding presentations and demonstrations without long journey times.

07/2019

### Welding machines

OTC DAIHEN offers a wide range of products: from small, portable manual welding machines for hobby and repair welding right up to powerful inverter welding machines for industrial use and robot welding. That is why the welding technology expert is always the ideal partner for fulfilling all customer wishes.

### Robots

OTC DAIHEN offers robots that are used in handling and welding and fulfil a wide range of requirements in terms of range, load capacity, and more. The welding robots are equipped with the necessary welding technology from one provider. Thanks to the minimal interface, the customer is offered optimal operation.

### Service & Training

At OTC DAIHEN, customers receive regular professional training from competent experts. This enables the customer to get to know their system well and allows them to operate it themselves.
